Education

Drexel University Philadelphia, PA

Bachelor of Science in Computer Science, Minor in Data Science *Graduation Date: June 2028*

- **Relevant Coursework:** Data Structures, Systems Architecture, Discrete Mathematics, Software Design, Artificial Intelligence, Human-Centered Design, Machine Learning
- **Certification:** Technical Interview Prep 101 CodePath

Experience

Software Developer Intern March 2026 – September 2026

Ethos Lab *Philadelphia, PA*

- Engineered a custom bucket storage module, replacing AWS S3 across a MERN-stack research platform
- Built a Node.js and Express service to dynamically parse, classify, and persist dataset files by extension type
- Developed 10+ RESTful APIs in Express, integrating MongoDB to manage user dataset uploads, retrievals, and deletions
- Authored 30+ automated unit tests, increasing backend code coverage by 17%

AI Trainer May 2026 – August 2026

Handshake AI Fellowship *Remote*

- Evaluated 200+ vision-language model outputs on computer vision tasks to identify logic errors and edge-case failure modes
- Wrote 200+ detailed feedback reports backed by independent technical research to improve dataset alignment and training signal quality

AV Support Assistant March 2025 – September 2025

Drexel University *Philadelphia, PA*

- Maintained 95% technology uptime across 80+ network-integrated facilities by executing system diagnostics and preventive infrastructure maintenance
- Implemented incident resolution workflows for 8–10 weekly technical tickets, conducting root-cause analysis and escalating unresolved bugs to senior technicians

Projects

AI Router Model System | *Python, scikit-learn, TF-IDF, NumPy, Anthropic API* October 2026 – Present

- Engineered an LLM inference router using Logistic Regression over TF-IDF features and structural signals, achieving a 0.865 ROC-AUC in prompt complexity classification
- Reduced API costs by 72.6% while retaining 99.1% of strong-model quality by dynamically routing 77.8% of incoming traffic to cost-efficient models
- Deployed an automated evaluation pipeline using Anthropic API and ThreadPoolExecutor to programmatically score and label a benchmark dataset of 2,000+ prompts
- Prevented data leakage during model tuning by using 5-fold out-of-fold cross-validation to select decision thresholds prior to held-out test set evaluation

Banking System | *Java, JUnit, Gradle, Pitest, YAML* September 2025 - December 2025

- Developed a core banking system using Test-Driven Development (TDD), implementing key business logic for transaction processing and state validation
- Designed 300+ automated JUnit test cases to maximize fault detection, achieving 93% line coverage and 93% mutation coverage verified via Pitest
- Configured YAML-based CI/CD workflows with Gradle to automate build tasks and style checks, leveraging automated mutation coverage reports to systematically refine test suites and eliminate surviving mutants

Technical Skills

Languages: Java, Python, JavaScript, TypeScript, C, HTML, CSS, YAML
Frameworks: React.js, Next.js, Express.js, Node.js, Tailwind CSS
Libraries: scikit-learn, TF-IDF, NumPy, JUnit, Pitest
Databases & Storage: MongoDB, GridFS, PostgreSQL
Developer Tools: GitHub, GitLab, Gradle, VS Code, IntelliJ, Linux
